

YOU CAN INSTALL A COMPASS POOL ALMOST ANYWHERE!

Don't let a difficult site stop you from having your dream pool! We can install Compass pools on hillsides, rooftops and almost anywhere in-between.

Traditionally, fibreglass pools have been limited to simple installations on flat sites. We changed the rules over 25 years ago when our dedicated engineers invented the MaxiRib™ above-ground installation system. For over two decades our dealer network has been installing swimming pools in places others would say were simply impossible.

In the past, if you had a sloping or difficult site, your options would be limited to expensive, highly-engineered concrete solutions. But thousands of Compass customers have turned to our MaxiRib™ solution to offer them a stunning and more cost-effective alternative.

The MaxiRib™ system uses a series of carefully placed ribs to provide added strength to the pool walls. This, coupled with the already-enhanced ceramic composite pool shell ensures the pool is strong enough to be installed in the most complicated of sites.

A Fastlane lap pool installed on a high-rise rooftop

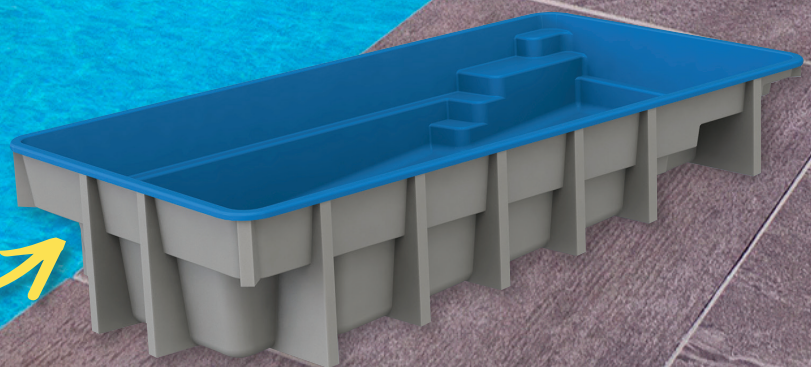

A partial out-of-ground installation of a Vogue swimming pool with cascading edge features

An early stage hillside installation of a Compass MaxiRib™ pool

The final product ready for swimming

We invented MaxiRib™ over 25 years ago to allow our pools to be installed on any site. The Compass MaxiRib™ system has been deemed so effective that it has been recognised with an Australian Design innovation award.
